

# Tables

Prof. Abby Stylianou

# Logistics

- Homework 1 due Thursday
- Post questions / discuss on Piazza
- Office hours tomorrow (1:30-2:30 in Ritter 107)

# Review from Last Class

- Lists + list comprehension
- Control Structures
  - for loops
  - while loops
  - if / else
  - if / elif / else
  - Loop control statements
    - Break, continue, pass

# Tables

- A Table is a sequence of labeled columns

# Tables

- A Table is a sequence of labeled columns
- Each row represents one individual

# Tables

- A Table is a sequence of labeled columns
- Each row represents one individual
- Data within a column represents one attribute of the individuals

<b>Name</b>	<b>Code</b>	<b>Area (m2)</b>
California	CA	163696
Nevada	NV	110567

# Tables

- A Table is a sequence of labeled columns
- Each row represents one individual
- Data within a column represents one attribute of the individuals

The diagram illustrates a table with three columns: Name, Code, and Area (m2). The first row contains 'California', 'CA', and '163696'. The second row contains 'Nevada', 'NV', and '110567'. Annotations include a 'Label' box pointing to the 'Code' header, a 'Row' box pointing to the 'Nevada' row, and a 'Column' box pointing to the 'Code' column. A blue box highlights the 'Code' column data, and another blue box highlights the 'Nevada' row data.

Name	Code	Area (m2)
California	CA	163696
Nevada	NV	110567

# Table Operations

- **Table.read\_table(filename)** – reads a table from a spreadsheet
- **Table()** – creates an empty table

```
t = Table.read_table('table_file.csv')
```

# Table Operations

- **`t.select(label)`** - constructs a new table with just the specified columns

# Table Operations

- **`t.select(label)`** - constructs a new table with just the specified columns
- **`t.drop(label)`** - constructs a new table in which the specified columns are omitted

# Table Operations

- **`t.select(label)`** - constructs a new table with just the specified columns
- **`t.drop(label)`** - constructs a new table in which the specified columns are omitted
- **`t.sort(label)`** - constructs a new table with rows sorted by the specified column

# Table Operations

- **`t.select(label)`** - constructs a new table with just the specified columns
- **`t.drop(label)`** - constructs a new table in which the specified columns are omitted
- **`t.sort(label)`** - constructs a new table with rows sorted by the specified column
- **`t.where(label, condition)`** - constructs a new table with just the rows that match the condition

# Table Operations

- **`t.select(label)`** - constructs a new table with just the specified columns
- **`t.drop(label)`** - constructs a new table in which the specified columns are omitted
- **`t.sort(label)`** - constructs a new table with rows sorted by the specified column
- **`t.where(label, condition)`** - constructs a new table with just the rows that match the condition

# Discussion Question

**nba** table:

How would you display just the row corresponding to the player who had the highest salary?

# Charles Joseph Minard, 1781-1870

- French civil engineer who created one of the greatest graphs of all time
- Visualized Napoleon's 1812 invasion of Russia, including:
  - Number of soldiers
  - Direction of the march
  - Latitude and longitude of each city
  - Temperature on the return journey
  - Dates in November and December

# Carte Figurative des pertes successives en hommes de l'Armée Française dans la campagne de Russie 1812-1813. Dressée par M. Mimarzd, Inspecteur Général des Ponts et Chaussées en retraite Paris, le 20 Novembre 1869.

Les nombres d'hommes présents sont représentés par les largeurs des zones colorées à raison d'un millimètre pour dix mille hommes; ils sont de plus écrits en travers des zones. Le rouge désigne les hommes qui entrent en Russie, le noir ceux qui en sortent. — Les renseignements qui ont servi à dresser la carte ont été puisés dans les ouvrages de M. M. Chiers, de L'égur, de Fezensac, de Chambray et le journal inédit de Jacob, pharmacien de l'Armée depuis le 28 Octobre. Pour mieux faire juger à l'œil la diminution de l'armée, j'ai supposé que les corps du Prince Jérôme et du Maréchal Davoust qui avaient été détachés sur Minsk et Mohilow et qui rejoignent Orscha et Wilna, avaient toujours marché avec l'armée.

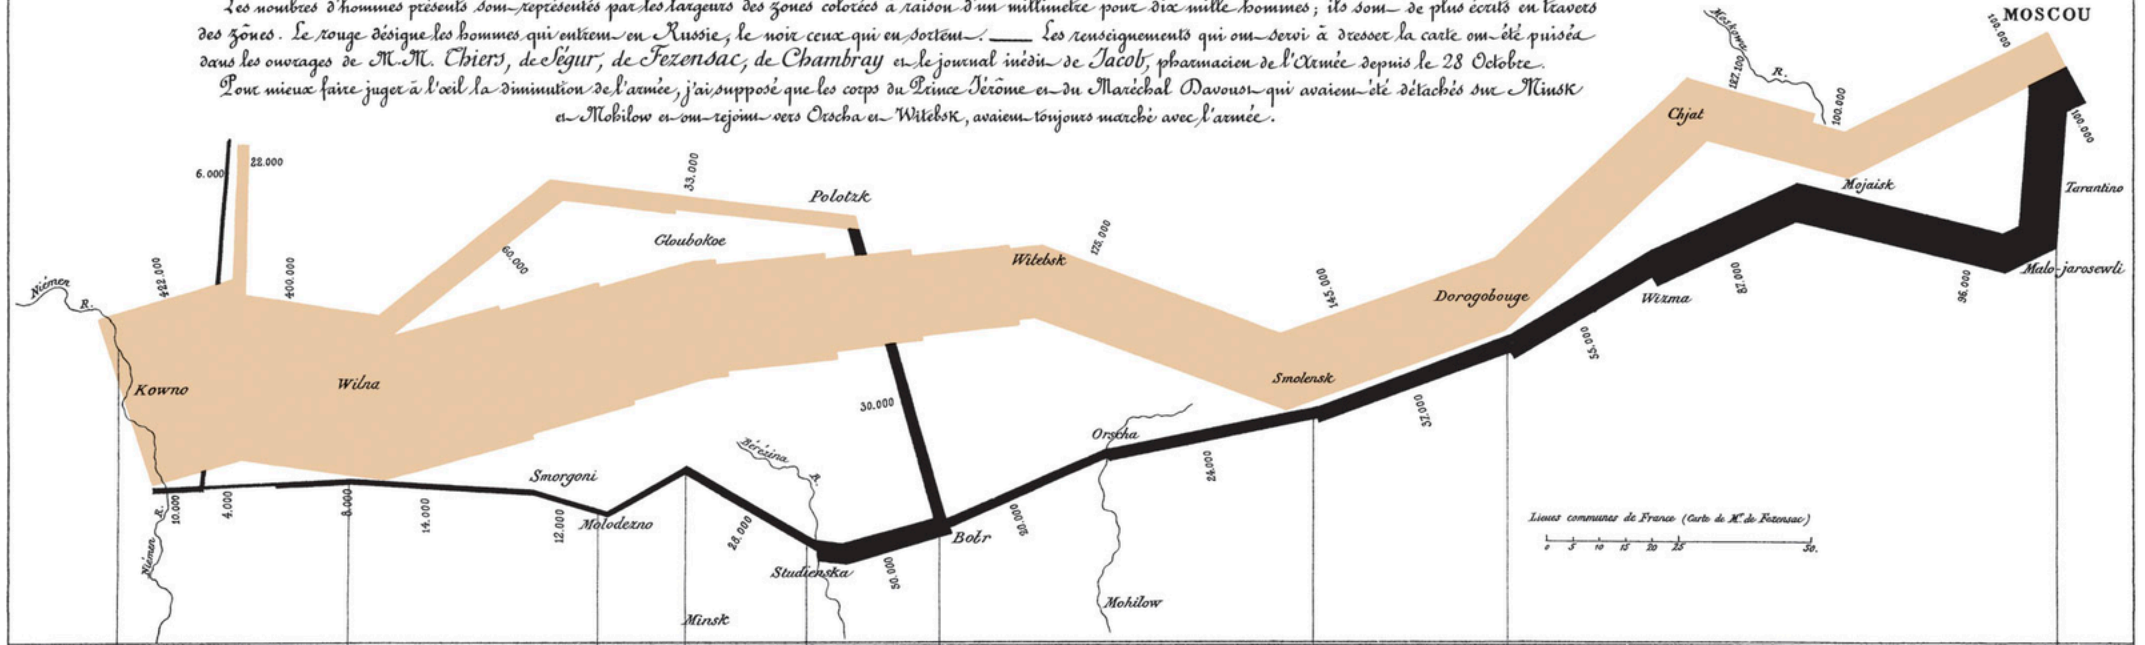

TABLEAU GRAPHIQUE de la température en degrés du thermomètre de Réaumur au dessous de zéro.

## Some of Minard's data

<b>Longitude</b>	<b>Latitude</b>	<b>City</b>	<b>Direction</b>	<b>Survivors</b>
32	54.8	Smolensk	Advance	145000
33.2	54.9	Dorogobouge	Advance	140000
34.4	55.5	Chjat	Advance	127100
37.6	55.8	Moscou	Advance	100000
34.3	55.2	Wixma	Retreat	55000
32	54.6	Smolensk	Retreat	24000
30.4	54.4	Orscha	Retreat	20000
26.8	54.3	Moiodexno	Retreat	12000
